How to Make a Mind Map- Creative Examples for Art Students:

The article thoroughly explained how different art students produce mind maps using their unique individual styles. The author comments that this form of brainstorming is a great way to begin a sketchbook and can easily be suited for each individual student. By reading this article I got an in-depth look at how beneficial mind maps actually are and how to implement personal touches in them in order to convey a specific theme. I enjoyed reading this article and seeing how different students' ideas are executed into detailed and beautiful presentations.

How to Use Mind Maps to Unleash Your Brains Creativity and Potential:

This article emphasized just how important mind maps are for efficient work. The author argues that using color, images, and icons in the form of a mind map encourages memory and creates an enjoyable study experience that is ultimately less stressful for the student. By reading this article, I learned just how useful and efficient this form of brainstorming and studying can be. The arguments the author used definitely sways me to want to start mind mapping instead of note-taking as it is a better form of memorization that is also creative.

Learn How to Use the Best Ideation Methods Worst Possible Idea Interaction Design Foundation:

This article clearly stipulates how in order to get ideas flowing in a group project there needs to be bad ideas communicated that break the ice in sorts. The author gives detailed steps for how to get the group to communicate well and start producing ideas with substance. By reading this article, I got an in-depth look at just how to have innovative group ideas. I agree with the author because bad ideas do indeed break the ice in a new and unfamiliar group setting.
